

HiPath 3000 from Siemens offers both traditional, feature-rich telephony and new world IP communications in one flexible, cost-effective solution.

The Siemens Hipath 3000 Range is flexible – providing a complete business communication solution for organizations between 2 and 500 employees. With HiPath 3000, you can use traditional telephony, with its long list of productivity-enhancing features where the infrastructure exists. Use the flexibility of IP communications to meet the needs of home workers or small branch office staff, where previously integration was difficult. The two technologies can exist side by side, giving you the choice of the most suitable means of delivering voice service, and allowing you to embrace the latest developments in IP voice at your own pace.

Within the 3000 Range there is the smaller 540 & 580 systems, the 3300 range and the 3500 range, both of these being available in wall / rack mounted options. The Top end system is the 3800, the general specifications of each system can be seen below:

Features	3800 Basic 19" Rack	3550 Wall Mounted	3550 19" Rack	3350 Wall Mounted	3350 19" Rack	540 Wall Mounted	580
Analogue users Max	384	96	44	36	20	4	4

Number of HiPath HG1500 boards	8	3	3	2	2	-	-

A range of modular communications platforms, this solution is designed to meet the needs of demanding medium-sized companies. It offers a flexible and scalable approach so you can mix and match a vast range of applications and features, depending on your unique business requirements.

With a background in feature-rich traditional telephony, and excellent pedigree in converged Voice and Data solutions, HiPath 3000 offers the best of both worlds. You can use Voice-over-IP capabilities to network sites and connect remote users to your head office or opt for the new SIP services being offered by carriers to further drive down communication costs. And the latest version of HiPath 3000 offers some even greater enhancements to contactability such as Cordless DECT and Voice over Wireless LAN (VoWLAN) for on-site communications.

It can now be used by GSM mobile users, working away from the office, providing them with one contact number for all communications. This means that customers can reach them wherever they are – in the office or out and about - eliminating the need to leave lengthy voicemails. HiPath 3000 also drives down mobile costs as calls are originated from the host HiPath system.

When it comes to selecting telephony devices, HiPath 3000 offers one of the broadest ranges of phones available – ensuring that your company's needs are met. Whether you want a plain elevator phone, Cordless DECT, WiFi phones for mobile workers or multi-feature agent phones, we have the right devices for you.
